I N F O R M A T I O N

INMARSAT has approved our application for license to use satellite lines under the same condition it has allowed MTB A/S (our company) to operate the Saturn T.

Commissioning of the two terminals (Saturn C) is performed at the manufacturers plant near Oslo. INMARSAT has informed its satellites of the license conceded and the identity number of the terminals.

All that is left now is to install and start-up. The two terminals have different identities which means both can be operational simultaneously.

Identity number or telex number of the terminals is as follows:-

Terminal No. 1	Serial No. 00161	ID/Telex No. 49 242 07 10
Terminal No. 2	Serial No. 00170	ID/Telex No. 49 242 07 20

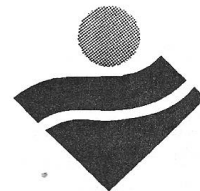

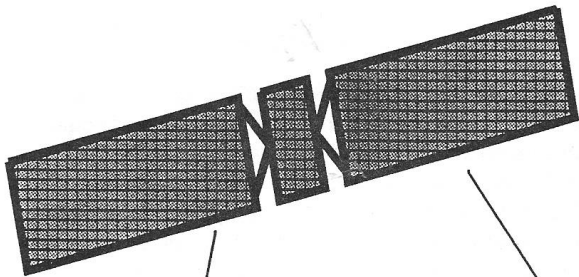

Please label the terminals with the correct identity number to avoid confusion. Specially if they are going to be placed in the same room. To know which is which you will find the serial number on the back of the electronic unit.

The four letter answerback I have chosen for the terminals is ENCS for Eritrean Norwegian Communication System. If you have other preferences it can be changed. To conclude I have put together the entire project documents in one compilation. It includes all correspondences, technical manuals and conditions layed down by the telecommunication authorities. A copy of this compilation will be send to you with the next available traveller to Eritrea.

The few items missing from your original list of accessories is because they are only for use in ships. The complete package for land-based terminals is sent to you in the standard package.
