Inquiry Concerning Drilling Equipments

I am writing this letter of inquiry after obtaining your company's address from an Italian friend working for Snamprogetti here in Norway. A relief organization working to aid drought stricken people in Eritrea ( North East Africa ) is interested in purchasing a full set of drilling equipments for water wells. At present I am surveying the equipments available in the market before making a selection. We are particularly interested in the more developed, light in weight, easily mobile equipments.

I would therefore like to request your company to send me brochure of your water well drilling products. Besides I would appreciate receiving a list of the main equipments and auxiliary equipments necessary to drill and install water pipe. The list should contain the name and type of the equipment, weight and cost of each. Any other data or technical information about the equipments or its performance in earlier operations would be of great interest for us. Please send the mail to my address in Stavanger, Norway.

I look forward for a quick response.

Sincerely Yours,

Emnetu Tesfay
