

Project - Super boots

SAGA WEEKLY week 39 issue

SUPER BOOTS - SAVE ENERGY

Motorized boots developed by a Soviet research institute are to enable a person to take 3 meter steps and keep an average speed of 40 km. per hr! Each of the boots weights ca. 2.5 kilos. When the sole is pressed against the ground a pressure plate lifts the wearer up and forward.

It is stated that anyone can learn the technique and that the motors need only 1 liter gasoline per 1 1/2 hr.of use.

Dear Mr. MAYOROV

In reference to our telephone conversation of today I hereby enclose a copy of the clipping from "SAGA WEEKLY" regarding the product so called SUPER BOOTS. The editor of SAGA WEEKLY told me that his source of information is DAGBLADET where it first appeared about a couple of weeks ago. I look forward to hear from your office about the availability of this product in the Norwegian Market. If not, I would still be interested to make an order from the Soviet Union through your good offices. Please provide information about delivery time and the price of the product.

Best regards.

Dear Sirs.

We thank you very much for your letter of the 4th of October. Unfortunately, we cannot for the time being introduce super boots on the market since they are developed only as experimental commodity and not in the current production.

As soon as we have any further news about the possibility to export super boots we shall inform you immediately.

Yours faithfully

Y.N.Mayorov
